WI-FI CONNECTIVITY INCIDENT

IT Help Desk Ticketing Lab

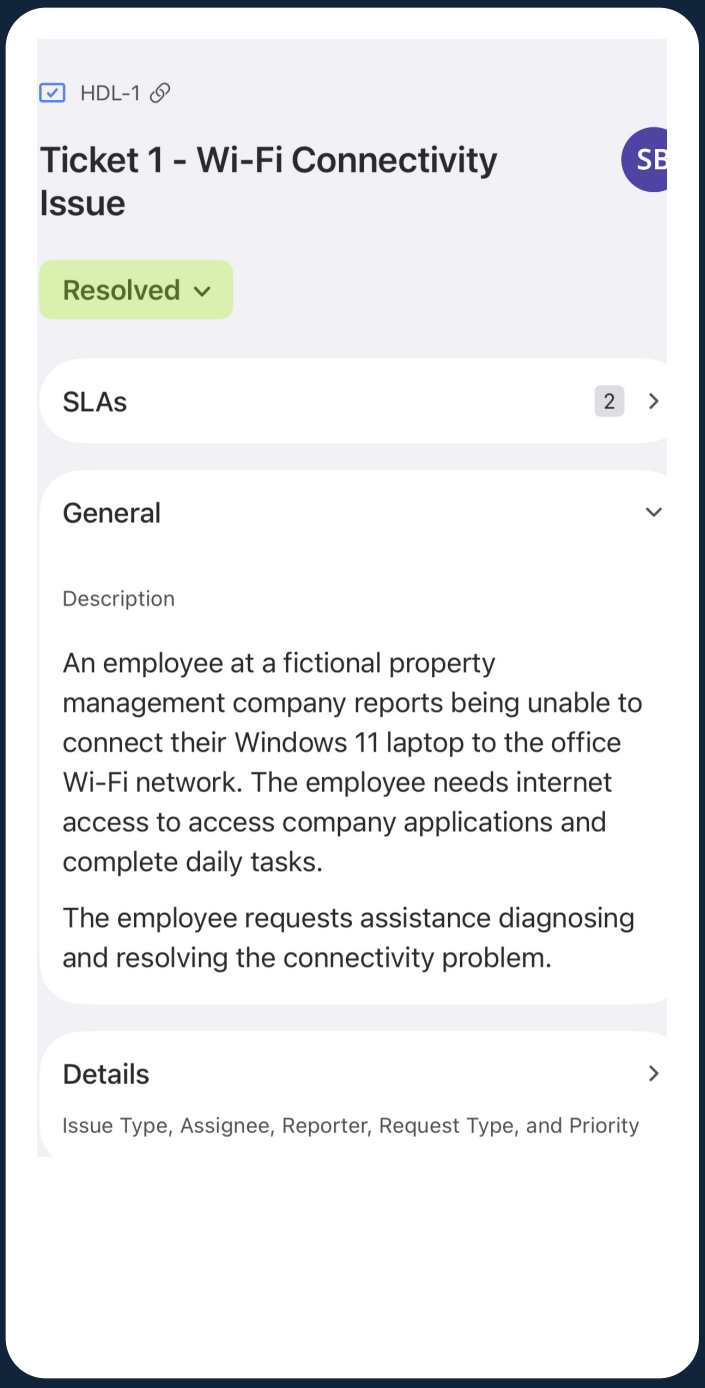

Jira Service Management

A documented support-request simulation focused on ticket intake, technical troubleshooting methodology, internal notes and workflow status.

STATUS: RESOLVED IN JIRA

30 OCTOBER 2026

TICKET HDL-1

CASE OUTCOME

Jira ticket created, placed in **Resolved** status and supported by a saved internal technical note.

01 / THE CASE

Scenario & diagnostic plan

SIMULATED USER REQUEST

An employee at a **fictional property management company** cannot connect a Windows 11 laptop to the office Wi-Fi network. Without access, the employee cannot use company applications or complete daily work.

Lab goal: Document a logical support response and show how an incident is recorded and tracked in Jira.

PROPOSED WINDOWS 11 TROUBLESHOOTING RUNBOOK

01 **Confirm radio settings**

Check Wi-Fi is enabled and airplane mode is off.

02 **Inspect network adapter**

Verify the wireless adapter is enabled in Device Manager.

03 **Review IP configuration**

Use **ipconfig /all** to inspect IP, gateway and DNS settings.

04 **Validate DHCP lease**

Check whether the device received a valid address.

05 **Reconnect to the SSID**

Forget the network and reconnect with authorized credentials.

06 **Restart adapter**

Disable and re-enable the Wi-Fi adapter if required.

07 **Test end-to-end access**

Use ping and confirm access to required applications.

EVIDENCE STANDARD

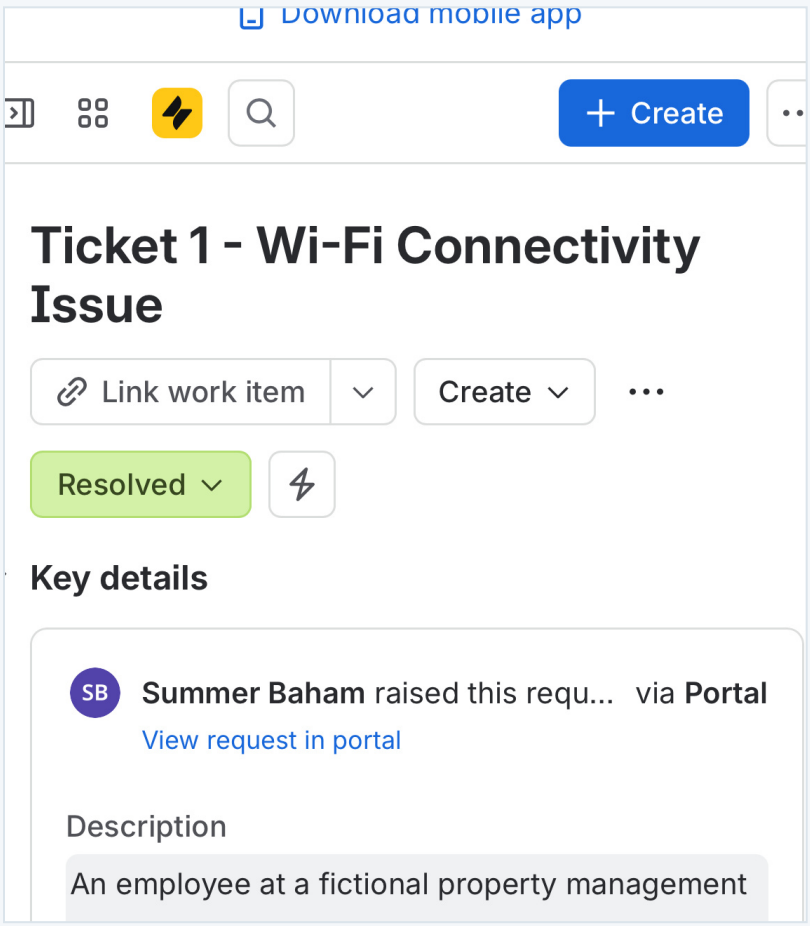

A live incident would require recorded test results and user confirmation before claiming connectivity was restored.

Scope note: Steps above are proposed diagnostics, not verified device actions.

02 / JIRA EVIDENCE

Ticket record & workflow

The screenshot below is a cropped view of the Jira record. The green status label is visible, alongside the incident title and service request description.

OBSERVED

HDL-1
Wi-Fi Connectivity Issue

Status: Resolved

WORKFLOW COMPLETED

01 Created ticket

02 Recorded scenario and service impact

03 Changed Jira status to Resolved

04 Added a private troubleshooting note

IMPORTANT VERIFICATION LIMIT

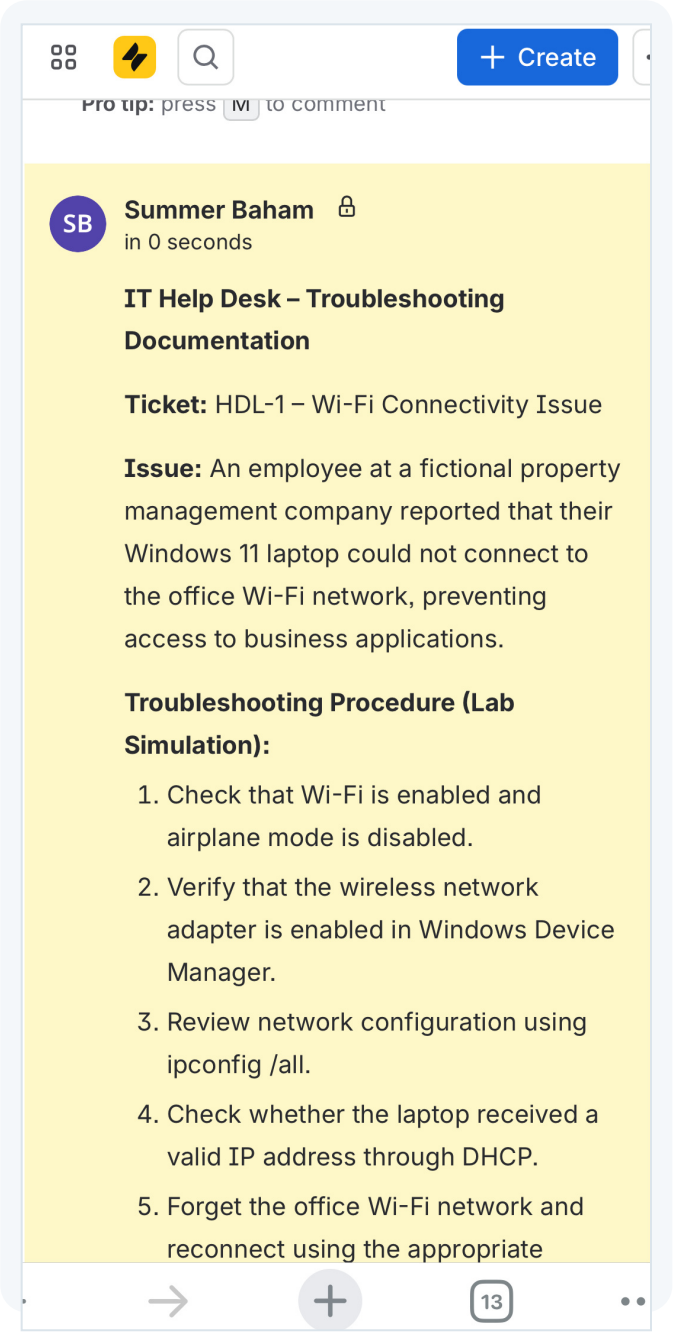

The separate Jira **Resolution** field was not independently verified. The screenshots do not establish that a real laptop was repaired or that the employee regained connectivity.

SKILLS SHOWN: Jira ticketing | incident documentation | internal notes

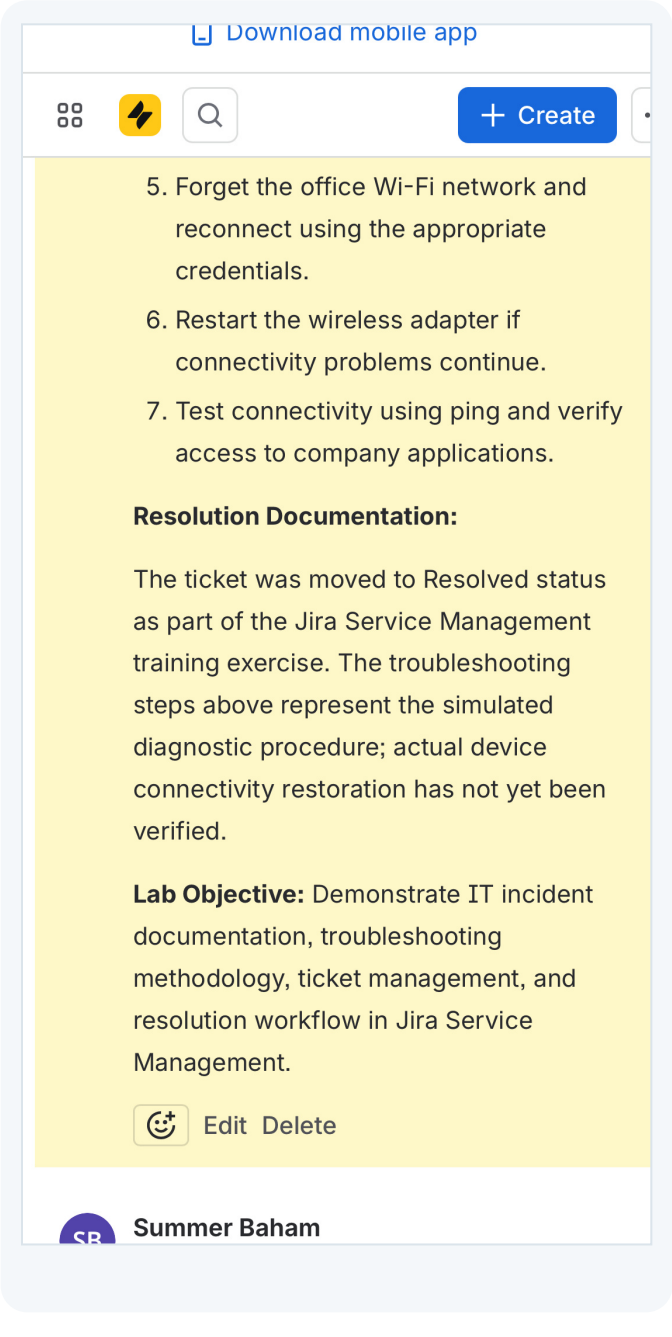

03 / DOCUMENTATION EVIDENCE

Saved internal technical note

These captured sections show the Jira activity note after it was saved. The note is marked internal (lock icon), describes a simulated seven-step procedure and states that a live fix was not verified.
