CASE STUDY 01

SERVICE DESK TICKETING & INCIDENT DOCUMENTATION

Wi-Fi connectivity incident: intake, diagnostic evidence, Jira ticket management and accurate closure notes

TICKET ID	PLATFORM
HDL-1	Jira Service Management
ENVIRONMENT	CASE TYPE
Windows 11 / Wi-Fi	Guided simulation

Evidence is drawn from the original Jira HDL-1 ticket export dated October 31, 2026. The fictional employee incident was not independently reproduced or repaired.

01 / REQUEST INTAKE

The support request

A clearly scoped, fictional Wi-Fi issue recorded in a real Jira training project.

INCIDENT STATEMENT

An employee at a fictional property management company could not connect a Windows 11 laptop to office Wi-Fi, preventing access to company applications and routine tasks.

RECORDED JIRA FIELDS

TICKET **HDL-1**	REQUEST **Get IT help**
PRIORITY **Medium**	IMPACT **One fictional employee**
ASSIGNEE **Summer Baham**	WORKFLOW STATUS **Resolved**

INITIAL TRIAGE

- Classify as network connectivity / Wi-Fi assistance.
- Assess impact and urgency; Medium was recorded in Jira.
- Investigate the reported symptom before claiming a fix.

Source: Jira HDL-1 exported ticket, page 1 (ticket metadata, description and initial assessment).

02 / TECHNICAL DIAGNOSIS

What the testing showed

Actual diagnostic results were recorded on a practice computer, not on the fictional employee laptop.

01

IP CONFIGURATION

ipconfig /all + ipconfig

Inspected wireless adapter, IPv4 settings and default gateway.

02

LOCAL NETWORK

ping 192.168.12.1

4 replies received; 0% loss; average ~4 ms.

03

EXTERNAL IP

ping 1.1.1.1

4 replies received; 0% loss; average ~29 ms.

04

NAME RESOLUTION

nslookup example.com

DNS returned IPv4 and IPv6 addresses.

05

BROWSER CHECK

https://example.com

The website loaded on the practice computer.

INTERPRETATION

These successful checks did not reproduce a Wi-Fi failure on the practice machine. They do not prove the fictional employee device was repaired.

03 / SERVICE DESK WORKFLOW

From intake to documentation

Ticket notes follow a reproducible workflow, with test evidence separated from simulated actions.

1

INTAKE

Record reported symptom and business impact.

2

PRIORITIZE

Log Medium priority; scope the hypothetical affected user.

3

PLAN

Check adapter, IP addressing, gateway, DNS and browser access.

4

TEST

Run local and external connectivity checks on the practice PC.

5

DOCUMENT

Record findings, technical notes and proposed next steps.

6

DISPOSE

Mark the training ticket Resolved; distinguish simulation from repair.

RECOMMENDED CLOSURE NOTE

“Training case completed. Practice PC passed gateway, external IP, DNS and browser checks. No fault was reproduced. No actual employee device recovery has been verified.”

04 / RESULTS AND QUALITY

Accurate case disposition

Strong service desk documentation includes what was not demonstrated, as well as what passed.

VERIFIED ON PRACTICE COMPUTER

- Local gateway reachable with 0% ping loss.
- External IP reachable with 0% ping loss.
- DNS lookup and browser access succeeded.
- A failure could not be reproduced during the recorded tests.

NOT VERIFIED IN THE FICTIONAL EMPLOYEE INCIDENT

- No real employee laptop or original fault was independently tested.
- No corrective action or Wi-Fi restoration was verified for that employee.
- No Tier 2 escalation was carried out in this HDL-1 case.

The ticket contains sample “connectivity restored” messaging; it should be understood as simulated communication rather than proof of a live repair.

QUALITY CHECK: WORKFLOW STATUS VS. RESOLUTION FIELD

The original Jira export lists Status: Resolved while the Resolution field still says Unresolved. This mismatch is worth correcting in Jira, if permissions/workflow allow, or explicitly noting for a reviewer.

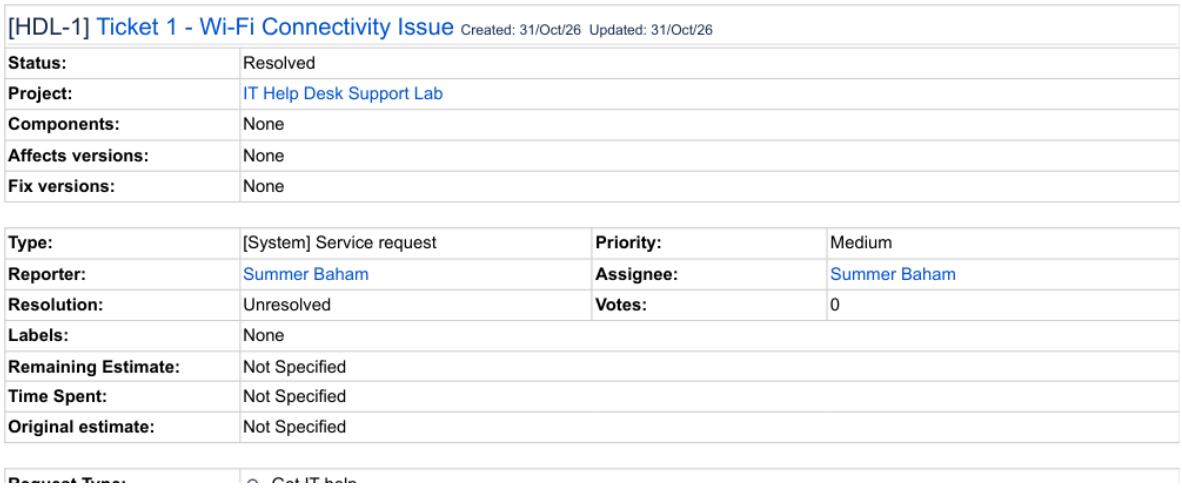

Suggested improvement: Use a clear disposition such as “Training completed - no fault reproduced” if the Jira workflow supports it; do not claim a verified production restoration.

Skills evidenced: ticket intake, categorization, technical troubleshooting, structured notes, result interpretation and honest end-user communication.

05 / EVIDENCE TRAIL

Original Jira record excerpts

Selected evidence from the source ticket export; this case study is a separate analysis of HDL-1.

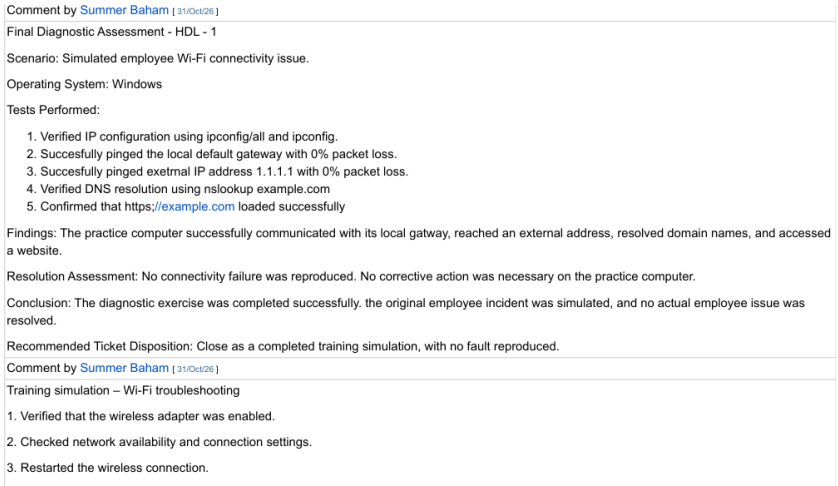

[HDL-1] Ticket 1 - Wi-Fi Connectivity Issue Created: 31/Oct/26 Updated: 31/Oct/26

Status:	Resolved
Project:	IT Help Desk Support Lab
Components:	None
Affects versions:	None
Fix versions:	None

Type:	[System] Service request	**Priority:**	Medium
Reporter:	Summer Baham	**Assignee:**	Summer Baham
Resolution:	Unresolved	**Votes:**	0
Labels:	None		
Remaining Estimate:	Not Specified		
Time Spent:	Not Specified		
Original estimate:	Not Specified		

EVIDENCE A / TICKET METADATA AND REPORTED ISSUE

Comment by Summer Baham [31/Oct/26]

Final Diagnostic Assessment - HDL - 1

Scenario: Simulated employee Wi-Fi connectivity issue.

Operating System: Windows

Tests Performed:

1. Verified IP configuration using ipconfig/all and ipconfig.
2. Succesfully pinged the local default gateway with 0% packet loss.
3. Succesfully pinged exetrnal IP address 1.1.1.1 with 0% packet loss.
4. Verified DNS resolution using nslookup example.com
5. Confirmed that https://example.com loaded successfully

Findings: The practice computer successfully communicated with its local gatway, reached an external address, resolved domain names, and accessed a website.

Resolution Assessment: No connectivity failure was reproduced. No corrective action was necessary on the practice computer.

Conclusion: The diagnostic exercise was completed successfully. the original employee incident was simulated, and no actual employee issue was resolved.

Recommended Ticket Disposition: Close as a completed training simulation, with no fault reproduced.

Comment by Summer Baham [31/Oct/26]

Training simulation – Wi-Fi troubleshooting

1. Verified that the wireless adapter was enabled.

2. Checked network availability and connection settings.

3. Restarted the wireless connection.

EVIDENCE B / RECORDED FOLLOW-UP AND FINAL ASSESSMENT

Source record: Summer_Baham_Jira_Service_Desk_Ticket_HDL1.pdf, 3-page export generated November 1, 2026. Keep the full ticket linked separately in your portfolio.
