Request participants:	None
Organizations:	None

Description

An employee at a fictional property management company reports being unable to connect their Windows 11 laptop to the office Wi-Fi network. The employee needs internet access to access company applications and complete daily tasks.

The employee requests assistance diagnosing and resolving the connectivity problem.

Intial Techinical Assessment - Ticket https://summerbahamcs.atlassian.net/browse/HDL-1

Issue: Employee unable to connect Windows 11 laptop to office Wi-Fi.

Category: Network Connectivity

Priority: Medium

Impact: One employee affected (simulated scenario).

Planned Troubleshooting Steps:

1. Verify that Wi-Fi is enabled and airplane mode is disabled
2. Check the wirless network adapter status
3. Review IP configuration using ipconfig / all.
4. Test network connectivity using the ping command.
5. Investigate DHCP, DNS, or wireless configuration issues if necessary
6. Document finding and determine whether resolution or escalation is required.

Current Status: Investigation initiated. Diagnostic testing and resolution are pending.

Comment by Summer Baham [31/Oct/26]

Technical Troubleshooting Results - https://summerbahamcs.atlassian.net/browse/HDL-1

Environment: Windows laptop used for a simulated IT Help Desk support scenario.

Dianostic Tests Performed:

1. IP Configuration: Executed ipconfig / all and ipconfig to inspect the Wi-Fi adapter, IPv4 configuration , and default gateway.
2. Local Network Connectivity: Executed ping 192. 168. 12. 1. All four packets were received successfully, with 0% packet loss and a an average response time of 4 ms.
3. External Network Connectivity: Executed ping 1 . 1 . 1 . 1. All four packets were received successfully, with 0% packet loss and an average response time of 29 ms.
4. DNS Resolution: Executed nslookup example.com. The DNS server successfully returned IPv4 and IPv6 addresses.

Findings: The practice computer successfully communicated with its default gateway, reached an external IP address, and resolved a domain name.

Assessment: No network connectivity failure was reproduced during the completed diagnostic tests. The original employee incident is fictional; no corrective action has been performed or verified.

Next Steps: Verify browser access and document the final outcome of the simulated support request.

Status: In Progress.

Comment by Summer Baham [31/Oct/26]

Final Diagnostic Assessment - HDL - 1

Scenario: Simulated employee Wi-Fi connectivity issue.

Operating System: Windows

Tests Performed:

1. Verified IP configuration using ipconfig/all and ipconfig.
2. Succesfully pinged the local default gateway with 0% packet loss.
3. Succesfully pinged exetrnal IP address 1.1.1.1 with 0% packet loss.
4. Verified DNS resolution using nslookup example.com
5. Confirmed that https;//example.com loaded successfully

Findings: The practice computer successfully communicated with its local gatway, reached an external address, resolved domain names, and accessed a website.

Resolution Assessment: No connectivity failure was reproduced. No corrective action was necessary on the practice computer.

Conclusion: The diagnostic exercise was completed successfully. the original employee incident was simulated, and no actual employee issue was resolved.

Recommended Ticket Disposition: Close as a completed training simulation, with no fault reproduced.

Training simulation – Wi-Fi troubleshooting

1. Verified that the wireless adapter was enabled.

2. Checked network availability and connection settings.

3. Restarted the wireless connection.

4. Reconnected to the correct wireless network.

5. Verified IP address and DNS settings.

6. Tested internet connectivity .

Simulated outcome: Wireless connectivity restored

Comment by Summer Baham [31/Oct/26]

Hello,

Your reported Wi-Fi connectivity issue has been addressed as part of this training scenario. The wireless connection has been restored and internet access verified.

Please let IT Support know if you experience any further connectivity issues.

Thank you,

IT Help Desk Support

IT Help Desk – Troubleshooting Documentation

Ticket: ☑ HDL-1 RESOLVED – Wi-Fi Connectivity Issue

Issue: An employee at a fictional property management company reported that their Windows 11 laptop could not connect to the office Wi-Fi network, preventing access to business applications.

Troubleshooting Procedure (Lab Simulation):

1. Check that Wi-Fi is enabled and airplane mode is disabled.
2. Verify that the wireless network adapter is enabled in Windows Device Manager.
3. Review network configuration using ipconfig /all.
4. Check whether the laptop received a valid IP address through DHCP.

5. Forget the office Wi-Fi network and reconnect using the appropriate credentials.
6. Restart the wireless adapter if connectivity problems continue.
7. Test connectivity using ping and verify access to company applications.

Resolution Documentation:

The ticket was moved to Resolved status as part of the Jira Service Management training exercise. The troubleshooting steps above represent the simulated diagnostic procedure; actual device connectivity restoration has not yet been verified.

Lab Objective: Demonstrate IT incident documentation, troubleshooting methodology, ticket management, and resolution workflow in Jira Service Management.
